

DMS User Manual

Document Management System — End User Guide

System	ALGT ERP — Document Management System (DMS)
Audience	All ERP Users who upload, manage or review documents
Manual	Manual 2 of 2 — End User Guide
Version	1.0
Date	17 June 2026
Language	English (Arabic document support included)

This guide explains how to upload documents, use AI-powered fill, search the document repository, manage expiry reminders, review AI suggestions, and work with the full DMS feature set — including Arabic document support.

1. Getting Started with DMS

The Document Management System (DMS) is your central hub for all business documents. You can upload, search, track, and collaborate on documents — with AI assistance that automatically reads Arabic and English documents and fills in the details for you.

1.1 Navigating the DMS

/dms	DMS Home — overview and quick links
/dms/documents	Full document repository — search and browse all documents
/dms/inbox	Upload Inbox — upload new documents here
/dms/inbox/batches	Batch Uploads — manage multi-file upload queues
/dms/expiring	Expiry Dashboard — documents expiring soon or already expired
/dms/renewals	Renewal Requests — track document renewal workflows
/dms/notifications	DMS Notifications — expiry alerts and system messages

2. Uploading Documents

2.1 Single File Upload — Upload & AI Fill (Recommended)

Upload & AI Fill is the fastest way to add documents. The AI reads your document (including Arabic), fills in the details automatically, and presents a pre-filled form for you to review. You confirm the details and click Approve & Save.

1	Go to DMS Inbox Navigate to <code>/dms/inbox</code> or click Upload Inbox in the sidebar.
2	Select your file Drag-and-drop your document onto the upload area, or click to browse. Supported: PDF, JPEG, PNG, TIFF, DOCX.
3	Click Upload & AI Fill Click the purple Upload & AI Fill button. The system uploads the file and runs AI analysis automatically.
4	Wait for AI processing The system runs OCR (reading the document), AI classification (identifying the document type), and field extraction (finding dates, names, numbers). This takes 5-15 seconds.
5	Review the AI-filled form You are taken to the intake review page. The form is pre-filled by AI. Check every field carefully — AI is highly accurate but not perfect.
6	Edit any incorrect fields Click on any field to change the AI-suggested value. All fields are editable.
7	Click Approve & Save When satisfied, click Approve & Save . The document is stored securely in the repository.

2.2 Understanding the AI Review Screen

Confidence Badges	High (green), Medium (amber), Low (orange), Needs Review (red). Low confidence = check that field more carefully.
Source Snippets	Small text excerpts show exactly where in the document each value was found.
AI Summary	A brief description of the document generated by AI — useful for quick verification.

AI Pipeline Card	If full orchestration is enabled, shows progress of: Summary, Intelligence, Embedding, Tags, Links.
Duplicate Warning	If the system detects a possible duplicate, a warning appears. Review before approving.

3. Working with Arabic Documents

The ALGT ERP DMS has full Arabic language support. You can upload Arabic documents and the AI will read, extract, and display information in both Arabic and English.

3.1 What the AI Extracts from Arabic Documents

Arabic Name (■■■■ ■■■■■■■■)	Full name in Arabic script — preserved exactly as on the document
English Name	English transliteration or English version of the name
Arabic Company Name	Official Arabic legal name of the company
Hijri Date (■■■■■ ■■■■)	AI detects Hijri dates and converts to Gregorian
Arabic Address (■■■■■■■)	Full address in Arabic
Arabic Activities (■■■■■■■)	Business activities in Arabic from trade license
Arabic-only documents	For documents with no English text, AI generates English explanation

3.2 Tips for Best Arabic OCR Results

- ✓ Use clear, high-resolution scans (300 DPI or higher) for the best results
 - ✓ Ensure the document is scanned flat — avoid angles or shadows
 - ✓ PDF format is preferred over JPEG for text preservation
 - ✓ Both printed Arabic and handwritten Arabic are supported
 - ✓ Bilingual documents (Arabic + English) are handled automatically
- If Arabic text appears as squares or question marks in the extracted text field, click **Re-run OCR (AI)** on the document's OCR tab. The AI vision engine will re-read the document and extract the Arabic text correctly.

4. Batch Upload

Batch upload lets you upload multiple documents at once. The AI processes each file automatically and creates a draft for each. You then review and approve each document one-by-one — bulk approval is not available.

1	Go to Upload Inbox Navigate to <code>/dms/inbox</code> . Click the Batch toggle at the top.
2	Select multiple files Drop multiple files onto the upload area or click to select. Maximum 10 files per batch.
3	Start Batch AI Fill Click Start Batch AI Fill . The system processes each file with AI.
4	Navigate to Batch Queue After processing, click Review Batch or go to <code>/dms/inbox/batches</code> .
5	Review each draft Click Review & Approve on each draft. You are taken to the full intake review screen.
6	Approve one at a time Review the AI-filled form, make any corrections, and click Approve & Save . Repeat for each document.

■ Important: You must approve each document individually. There is no 'Approve All' button. Each document requires your personal review and confirmation before it becomes active.

5. Document Repository

5.1 Browsing and Searching Documents

- Go to **/dms/documents** to see all documents you have access to
- Use the **Search bar** at the top to find documents by title, number, or content
- Use **Filters** to narrow by document type, category, date range, status, or risk level

5.2 Search Modes

Quick Search	<i>Auto</i>	Fast text search on document number and title
Safe Search	<i>Magnifying glass</i>	Full-text search within extracted document content
Content Search	<i>Page icon</i>	Deep search within complete document text
AI Search	<i>Brain icon</i>	Describe what you are looking for in plain language — AI finds relevant documents
Semantic Search	<i>Compass icon</i>	Find documents similar in meaning to a query phrase

■ AI Search and Semantic Search understand Arabic queries. Try searching in Arabic:   or  

5.3 Ask AI — Ask Questions About a Document

Open any document → click the **Ask AI** tab → type a question in English or Arabic:

- "What is the expiry date of this document?" → AI answers from the document content
- "                             

6. Document Record — Sections

Click any document in the repository to open its full record. The record has multiple sections:

Overview	Basic info: document number, title, type, dates, status, confidentiality level, owning company/branch.
Metadata	Custom fields specific to this document type (e.g. license number, TRN, ID number, expiry date).
Links	ERP entities linked to this document: parties, companies, employees. AI Smart Links suggests links.
Tags	Tags applied to this document. AI Auto-Tags suggests relevant tags from the tag library.
Versions	Full version history. Upload a new version to replace the current file while keeping history.
Files	All files attached to this document. Preview, download, or view OCR results per file.
Expiry	Expiry date, reminder schedule, and renewal request management.
OCR / Text	Raw extracted text from the document. View or download. Run OCR here if text is missing.
AI Summary	AI-generated 3-5 sentence summary of the document. Regenerate if needed.
Intelligence	Completeness score (how complete the metadata is) and Risk score (expiry/missing data risk).
AI Analysis	Detailed AI classification and field extraction results with confidence scores.
Semantic	Document embedding status. Find Similar Documents using AI semantic search.
Comments	Internal comments and notes on the document — visible to authorized users only.
Audit	Complete audit trail: who created, edited, viewed, or changed the document.

7. Uploading a New Document Version

When a document is renewed (e.g. trade license renewed for another year), upload the new version instead of creating a new document. This preserves the document history and all linked entities.

1	Open the document record Find the document in the repository and click to open it.
2	Go to Versions tab Click the Versions tab in the left section navigation.
3	Click Upload New Version Click Upload New Version — the file selector appears.
4	Select the new file Choose the renewed/updated document file.
5	Add version notes Enter a brief note like 'Renewed 2026 — valid until Dec 2027'.
6	Confirm upload The new file becomes the current version. Old versions remain in history.

■ After uploading a new version, update the expiry date in the Overview tab if the renewal extends the validity period.

8. Expiry Tracking and Renewals

8.1 Expiry Dashboard

- Go to **/dms/expiring** to see all expiry-tracked documents
- 9 summary cards show counts by expiry urgency: Expired, 90/60/30/14/7/1 days, Missing, Total
- Four tabs: Expired / Expiring Soon / Missing Expiry / Renewal Requests

8.2 What to Do with Expiring Documents

90 days	AMBER	Plan renewal — contact the issuing authority
60 days	AMBER	Begin the renewal process — submit applications
30 days	ORANGE	Renewal must be in progress — follow up
14 days	RED	Urgent — escalate if renewal not confirmed
7 days	RED	Critical — document may be unusable after this
Expired	RED	Immediate action — check if operations are affected

8.3 Starting a Renewal Request

- Open the expiring document → **Expiry** tab → click **Start Renewal**
- Fill in renewal details: expected renewal date, notes
- Track status: draft → requested → in_progress → renewed
- Once renewed, upload the new document as a new version and mark the renewal Complete

9. AI Features for Users

9.1 AI Document Summary

Every document automatically receives a 3-5 sentence AI summary. It appears in the **AI Summary** tab and is shown in search results. The summary preserves Arabic names in Arabic script.

- If a summary is missing: Open the document → AI Summary tab → click **Generate Summary**

9.2 AI Risk and Completeness

- **Completeness Score** — How complete the document metadata is (0-100%). Low = missing important fields.
- **Risk Score** — Based on: expired document, missing expiry, low confidence extraction, missing content.
- Risk Levels: None (green) / Low / Medium / High / Critical (red)
- View in: Intelligence tab on any document record
- High/Critical risk documents appear highlighted in search results

9.3 AI Tag Suggestions

- Open document → Tags tab → click **Suggest Tags**
- AI suggests tags with confidence scores based on document content and type
- Click **Accept** on tags that are relevant, **Reject** on any that are wrong
- Tags help with searching and filtering the document repository

9.4 Smart Links — Link Documents to ERP Entities

- Open document → Links tab → click **Suggest Links**
 - AI identifies companies, parties, or organizations mentioned in the document
 - Reviews matches from the Party Master (including Arabic company names)
 - Accept links to connect the document to the correct ERP party record
- Arabic company names are matched correctly: ■■■■■ ■■■■■■■■ will match the Arabic name in the party record even if the display name is English.

10. Finding Similar Documents

The Semantic Search feature lets you find documents that are similar in content to any document you are viewing. This is useful for identifying duplicates, finding related contracts, or grouping similar certificates.

10.1 From a Document Record

- Open any document → **Semantic** tab
- Click **Find Similar Documents**
- The system shows up to 10 documents most similar in content, with a similarity percentage

10.2 Semantic Search in the Repository

- Go to **/dms/documents**
 - Select **Semantic Search** mode (Compass icon)
 - Type a description: 'Trade license for construction company in Dubai'
 - The AI finds the most semantically similar documents even if the exact words don't match
- Semantic search works in Arabic too. Try: 'تراخيص شركات البناء في دبي' to find Arabic construction trade licenses.

11. Notifications

DMS notifications keep you informed about expiring documents and important document events. Check your notifications regularly to stay ahead of renewals.

11.1 Viewing Notifications

- Go to **/dms/notifications** to see all DMS notifications
- Notifications are grouped by: Unread / All / Expiring / Expired / Renewal
- Click on any notification to go directly to the relevant document

11.2 Notification Types

Expiry Warning 90 days	Early notice — document expires in about 3 months
Expiry Warning 60 days	Planning notice — begin renewal process
Expiry Warning 30 days	Action required — 30 days to expiry
Expiry Warning 14 days	Urgent — escalate if not being renewed
Expiry Warning 7 days	Critical — last week before expiry
Expiry Warning 1 day	Final warning — document expires tomorrow
Document Expired	The document has expired — immediate action needed
Renewal Requested	A renewal request has been submitted for your document

12. Document Confidentiality

Every document has a confidentiality level. Make sure you set the correct level when uploading sensitive documents like HR records, legal agreements, or executive reports.

internal	Normal business documents — all ERP users can view
company	Company-restricted — management and above
finance	Finance team restricted — finance team and above
hr	HR restricted — HR team and above
legal	Legal restricted — legal team and above
executive	Executive only — senior leadership only

■ HR, Legal, and Executive documents require DMS Admin access to run AI analysis or generate summaries. Contact your administrator if you need these features on restricted documents.

13. Quick Reference

Upload a new document	Go to /dms/inbox → Upload & AI Fill
Upload multiple documents	Go to /dms/inbox → Batch mode
Search for a document	Go to /dms/documents → use search bar
Find documents by content	Use Content Search or AI Search mode
Ask a question about a doc	Open document → Ask AI tab
Find similar documents	Open document → Semantic tab → Find Similar
Generate AI summary	Open document → AI Summary tab → Generate Summary
Run OCR on a document	Open document → OCR tab → Run OCR (AI)
Check expiring documents	Go to /dms/expiring
Start a renewal request	Open document → Expiry tab → Start Renewal
Upload a new version	Open document → Versions tab → Upload New Version
Add tags to a document	Open document → Tags tab → Accept AI suggestions or add manually
Link document to a party	Open document → Links tab → Suggest Links → Accept
Download a document	Open document → Files tab → Download button
Check AI risk score	Open document → Intelligence tab
View audit trail	Open document → Audit tab
